Estimation on under-coverage	Yes; No (% of work force covered)	Regarding the sampling method to characterize the accidents, Portugal continental fatal occupational accidents and the fatal accidents and non-fatal occurred in the autonomous regions and abroad were treated extensively. For non fatal accidents on the continent and for the variables contained in the shares, a random sample was selected. The selection of the shares was made according to the systematic selection method. It was established a priori that the sample size would be one sixth of the universe (accidents on the continent with no fatal consequences), which represents about 32,000 entries received in 2013.	Respondents 93% of the institutions in 2014 and 88% of the institutions in 2013. Institutions not included in the survey: Centro de Medicina e de Reabilitação do Sul, Serviços Partilhados do Ministério da Saúde, EPE, Hospital de Cascais, Hospital Beatriz Ângelo – Loures	No. Data is not available on the under-coverage of accidents or diseases

Remarks				
Methodological remarks	Free text	The characterizing of the employers, of the victims of the accident and of the causes and circumstances of the accidents, is based on a sample from the information received from the insurance companies. It was established a priori that the sample size would be one sixth of the universe (accidents on the continent with no fatal consequences), which represents about 32,000 entries received in 2013.	Data is referred to online survey. The respondents were the services and departments of the Ministério da Saúde (Ministry of Health).	The "Relatório Único" is constituted by 6 annexes, where annex D is the "Relatório Anual da Atividade do Serviço de Segurança e Saúde no Trabalho (SST)" (Yearly occupational safety and health report). It is a source of administrative information whose response is required to all employers covering the whole country. The actual document refers to the Continental geographical area of Portugal
